DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a) because they fail to show the detailed connection of transistors M8-M12 as described in the specification, page 8. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2816

2. Claims 2-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 2-3, 5-7 and 9-11, the recitation of “the current selector circuit” in line 1 lacks proper antecedent basis.

In claim 7, the recitation of “a third current mirror” lacks proper antecedent because there are no first and second current mirror recited in claim 1. The recitation of “the current multiplier” in line 4 lacks proper antecedent basis.

In claims 4 and 8, the recitation of “the biasing current selector circuit’ in line 1 lacks proper antecedent basis.

In claim 9, the recitation of “the firs current mirror” in line 1 lacks proper antecedent basis.

In claim 12, the recitation of “applying a first and a second current to a first receiving means input terminal of a first receiving means” is indefinite because it is misdescriptive of the present invention. Figure 2 shows only one current is being applied to a receiving means.

Clarification and correction are required.

Claims 13-20 are indefinite because of the technical deficiencies of claim 12.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2816

4. Claims 21-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Ichimaru (USP 5,661,426).

Figure 1 of Ichimaru shows a current selective D flip flop circuit capable of performing biasing current selection, the current selective D flip flop circuit comprising a D flip flop (1), a current selector circuit (2, 27, 28 of figure 2) coupled to the D flip flop (figure 2 shows current being selected to current mirror circuits 3 and 4 via either the transistors 27 or the transistor 28), a current multiplier (3 and 4), wherein the current selector circuit is coupled to D flip flop to the current multiplier as called for in claim 21.

Regarding claim 22, the figure 1 shows the current multiplier comprises a current mirror source (25, 26, 31) being coupled to the current selector circuit, and a multiple output current mirror (3, 4) being coupled to the current mirror source and the D flip flop.

Allowable Subject Matter

5. Claim 1 is presently allowed.

6. Claims 2-11 and 12-20 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. In this regard, applicant's cited prior art has been carefully considered.
